Unifi on Windows XP (Service Pack 3) Guide

Step one

NOTE: You must have installed Windows XP Service Pack 3 before continuing; Unifi will not work on earlier versions of Windows.

Click on the Start menu and select “Connect to”. Click on “Wireless Network Connection” to get to the list of wireless networks. Click on “Change advanced settings”.

Step two

Click on the “Wireless Networks” tab.

Step three

Under “Preferred networks”, click “Add”.

Step four

Enter the following information in the window that appears:

- Network name (SSID): Unifi
- Network Authentication: WPA2
- Data encryption: AES

Then click on the “Authentication” tab.

Unifi on Windows XP (Service Pack 3) Guide

Step five
Select “Protected EAP” from the “EAP type” drop-down menu. Uncheck the “Authenticate as computer when computer information is available” checkbox.

Click the “Properties” button.

Step six
Uncheck the “Validate server certificate” checkbox.

Click the “Configure” button.

Step seven
Uncheck the “Automatically use my Windows logon name and password (and domain if any).” checkbox. Click “OK”.

Step eight
Click “OK” to close all windows which have been opened in previous steps.

Step nine
After a few seconds, a notification will appear, saying “Click here to select a certificate or other credentials for connection to the network Unifi”. Click on this notification.

*NOTE*: You must never connect to Unifi using the dialog from Step one. Doing so will overwrite your network settings for Unifi, preventing you from connecting.

*You must always wait for Windows to connect to Unifi automatically.*

Unifi on Windows XP (Service Pack 3) Guide

Step ten
Enter the following details in the resulting window:

- **User name:** Your UWA student number
- **Password:** Your Pheme password

Click “OK”.

An icon indicating the connection is establishing will appear. It may take some time to establish the first time the connection is made.

You are done!
After a few seconds you should be notified that the connection was established successfully. You now have Internet access.

Doesn’t work?
Try the following tips:

- Move around to ensure you are in a location with good wireless reception.
- Double-check your student number and Pheme password are correct and have not expired.
- Ensure that you have Windows XP Service Pack 3 installed. Unifi will not work unless you have Service Pack 3 installed.

Still doesn’t work? Help is available!
